

Benjamin Lordi - Data Scientist

About Me

A data professional with deep data science and data security experience. I specialize in uncovering the story behind the numbers, programming tools and models to answer pressing business questions, and communicating important insights to a non-technical audience.

My expertise spans machine learning, statistical analysis, data visualization, and secure data handling practices. I also have experience in digital forensics and incident response, and threat intelligence.

When I'm not diving deep into data, I enjoy rock climbing, backpacking, cooking, playing all sorts of games and continuously learning about emerging technologies in the data science field.

My Projects

Data Science Portfolio

Here's a collection of my projects for Modern Software Concepts in Python.

[View All Projects on GitHub](#)

Personal Website

[Web Development](#) [Python](#) [Flask](#)

I created this website! I used Flask as my framework and relied heavily on templating and blueprints. I used Claude Sonnet 4 to create the HTML and CSS.
